

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously Presented) A portable electronic device comprising:

a first display panel for displaying an image; and

a second display panel comprising a touch input operational portion,

wherein the first display panel and the second display panel are attached to each other in a longitudinal direction or in a lateral direction,

wherein the second display panel is an active matrix display,

wherein the first display panel is one of a liquid crystal display panel and an EL display panel and the second display panel is the other one of the liquid crystal display panel and the EL display panel.

2. (Previously Presented) A portable electronic device comprising:

a cover member comprising a first display panel for displaying an image; and

a second display panel comprising a touch input operational portion,

wherein the cover member and the second display panel are attached to each other so as to allow opening and closing,

wherein the second display panel is an active matrix display,

wherein the first display panel is one of a liquid crystal display panel and an EL display panel and the second display panel is the other one of the liquid crystal display panel and the EL display panel.

3. (Previously Presented) A portable electronic device according to claim 2, wherein a third display panel is provided between the cover member and the second display device.

4. (Previously Presented) A portable electronic device according to claim 1, wherein the first display panel comprises a touch input operational portion.

5. (Previously Presented) A portable electronic device according to claim 2, wherein the first display panel comprises a touch input operational portion.

6. (Previously Presented) A portable electronic device according to claim 1, wherein the second display panel displays one of a character, a symbol, buttons and an image.

7. (Previously Presented) A portable electronic device according to claim 2, wherein the second display panel displays one of a character, a symbol, buttons and an image.

8. (Previously Presented) A portable electronic device according to claim 1, wherein one of the first display panel and the second display panel comprises an image pickup device.

9. (Previously Presented) A portable electronic device according to claim 2, wherein one of the first display panel and the second display panel comprises an image pickup device.

10. (Previously Presented) A portable electronic device according to claim 1, wherein one of the first display panel and the second display panel comprises a system for identifying a user.

11. (Previously Presented) A portable electronic device according to claim 2, wherein one of the first display panel and the second display panel comprises a system for identifying a user.

12-15 (Canceled).

16. (Previously Presented) A portable electronic device according to claim 3, wherein the third display panel comprises an image pickup device.

17. (Previously Presented) A portable electronic device according to claim 3, wherein the third display panel comprises a system for identifying a user.

18. (Previously Presented) A portable electronic device according to claim 3, wherein the third display panel is one of a liquid crystal display device and an EL display device.

19. (Previously Presented) A portable electronic device comprising:

- a cover member comprising an active matrix EL display panel for displaying an image; and
- a reflection display panel,

wherein the reflection display panel comprises a touch input operational portion,

wherein the cover member and the reflection display panel are attached to each other so as to allow opening and closing, and

wherein the reflection display panel is made to display by irradiating light emitted

from the active matrix EL display device.

20. (Canceled)

21. (Original) A portable electronic device according to claim 1, wherein the portable electronic device comprises a communication function.

22. (Original) A portable electronic device according to claim 2, wherein the portable electronic device comprises a communication function.

23. (Original) A portable electronic device according to claim 19, wherein the portable electronic device comprises a communication function.

24. (Previously Presented) A portable electronic device comprising:
a liquid crystal display panel; and
an active matrix EL display panel,
wherein the liquid crystal display panel and the active matrix EL display panel are attached to each other so as to allow opening and closing.

25. (Previously Presented) A portable electronic device according to claim 24, wherein the liquid crystal display panel comprises a touch input operational portion.

26. (Previously Presented) A portable electronic device according to claim 24, wherein the

active matrix EL display panel displays an image.

27. (Previously Presented) A portable electronic device according to claim 24, wherein the active matrix EL display panel comprises an image pickup device.

28-33. (Canceled)

34. (Previously Presented) A portable electronic device according to claim 1, wherein the first display panel is an active matrix display.

35. (Previously Presented) A portable electronic device according to claim 2, wherein the first display panel is an active matrix display.

36. (Currently Amended) A portable electronic device comprising:

- a first display device for displaying an image; and
- a second display device comprising a touch input operational portion,

wherein the first display device and the second display device are attached to each other,

wherein the first display device is one of an active matrix liquid crystal display device and an active matrix EL display device,

wherein the second display device is one of an active matrix liquid crystal display device and an active matrix EL display device,

wherein the first display device or the second display device includes a top gate TFT,

wherein the first display device has a higher resolution than that of the second display device.

37. (Previously Presented) A portable electronic device according to claim 36, wherein the TFT formed of a semiconductor layer of polysilicon is used .

38. (Previously Presented) A portable electronic device according to claim 36, wherein the TFT formed of a semiconductor layer of amorphous silicon is used.

39. (Previously Presented) A portable electronic device according to claim 36, wherein the second display device displays one of buttons and an image on a screen.

40. (Previously Presented) A portable electronic device according to claim 36, wherein the portable electronic device comprises a communication function.

41. (Previously Presented) A portable electronic device according to claim 36, wherein a screen of the second display device is switched to various input keys.

42. (Previously Presented) A portable electronic device according to claim 36, wherein the TFT is formed a pixel portion or a driver circuit or a memory or a microprocessor on a substrate.

43. (Previously Presented) A portable electronic device according to claim 36, wherein the portable electronic device is selected from the group consisting of a mobile telephone, a mobile

television telephone, and a portable computer.

44. (Currently Amended) A portable electronic device comprising:

- a first display device for displaying an image; and
- a second display device comprising a touch input operational portion,

wherein the first display device and the second display device are attached to each other,

wherein the first display device is one of an active matrix liquid crystal display device and an active matrix EL display device,

wherein the second display device is one of an active matrix liquid crystal display device and an active matrix EL display device,

wherein the first display device or the second display device includes an inverse stagger TFT,

wherein the first display device has a higher resolution than that of the second display device.

45. (Previously Presented) A portable electronic device according to claim 44, wherein the TFT formed of a semiconductor layer of polysilicon is used.

46. (Previously Presented) A portable electronic device according to claim 44, wherein the TFT formed of a semiconductor layer of amorphous silicon is used.

47. (Previously Presented) A portable electronic device according to claim 44, wherein the

second display device displays one of buttons and an image on a screen.

48. (Previously Presented) A portable electronic device according to claim 44, wherein the portable electronic device comprises a communication function.

49. (Previously Presented) A portable electronic device according to claim 44, wherein a screen of the second display device is switched to various input keys.

50. (Previously Presented) A portable electronic device according to claim 44, wherein the TFT is formed a pixel portion or a driver circuit or a memory or a microprocessor on a substrate.

51. (Previously Presented) A portable electronic device according to claim 44, wherein the portable electronic device is selected from the group consisting of a mobile telephone, a mobile television telephone, and a portable computer.
